

Clues listed below can help you find the words.

1024 bytes (8)

A LAN device driver which translates operating system requests into network events. (10)

A binary code that gives each character and symbol on the keyboard a unique binary code (5)

A device to divide an Ethernet network up into separate collision domains. (6)

A group of 8 bits (4)

A measure of how well a computer representation of an image, sound etc. matches the original. (8)

A multi-port repeater in an Ethernet network. (3)

A network protocol developed by Microsoft and originally used with LAN Manager. (7)

A picture element which is the smallest display element. (5)

A separate memory, operating at high-speed used to hold screen data that is to be displayed. (4)

A unit that sits between the CPU and a peripheral device. (9)

Amount of data handled by the processor in a single operation (4)

Contains the data to be written to memory or receives the data

read from memory (3)

Marks the beginning of a character in asynchronous transmission. (8)

Occurs when two devices transmit simultaneously on an Ethernet network. (9)

Reducing the amplitude of a sound sample to fall within a given sample range. (8)

Secure Hyper Text Transmission Protocol encrypts data transmitted over the Internet. (5)

Software or hardware which protects a local area network from outside access (8)

Software used to render HTML pages. (7)

Stands for Millions of Instructions Per Second. (4)

The amount of data that is stored per sample. (10)

This occurs when the CPU ignores an interrupt request from a peripheral. (11)

Used to transfer data to and from the CPU. (7)

Voice and data are carried by bearer channels (B channels) occupying a bandwidth of 64 Kbps (4)
