

Across

2. A program that translates a complete high level language program into an independent machine code program.
4. The finished program runs to specification and is robust and reliable.
11. A program is robust if it can cope with problems that come from outside and are not of its own making.
13. Commercial Off The Shelf software.
14. The person or group that initiates the development process by specifying a problem.
16. An iterative process is one that incorporates feedback and involves an element of repetition.
17. Generic description of the personnel involved in developing the software solution.

Down

1. Independent machine code that can be run without

translation.

3. An argument of a procedure or function that represents a local variable.
5. The sharing of characteristics between a class of object and a newly created sub class.
6. A looping system where information is fed back in to a computer system.
7. Rapid Application Development.
8. A document outlining the program requirements set by the client.
9. A system that responds to an external event such as mouse click or a key press.
10. The detection, location and removal of errors in a program.
12. Data that is used to test whether software works properly and that it is reliable and robust.
15. A pen and paper exercise to debug a program.
