- a primary key from a table included in another table to form a relationship (10)
- a quick reference to speed up use of database (7)
- collection of data in a table (6)
- create database structures (6)
- data item in an entity (9)
- data items in existing system (15)
- describes data items in system (14)
- describes relationship between two entities (12)

- identify and organise data (8)
- implement structures, functions (14)
- makes up primary key (12)
- produces plan for relational database system (13)
- produces realistic new entities (13)
- repeating groups removed within primary entities (15)
- uniquely identifies each record in a table (10)
