A collection of programs that help the computer hardware to work properly. (14)

A list of instructions which tell the processor what to do. (7)

A mistake in a programming function - for example PRIN instead of PRINT. (11)

A mistake in the computer's operating system program which may stop the computer working. (11)

A mistake which causes the program to produce an unexpected result, for example, using an incorrect formula. (10)

A phrase which appears on the screen to ask the user for input. (7)

Beginner's All-purpose Symbolic Instruction Code. (5)

Changing each step of your refinements into the programming (6)

It controls the process involved in saving and loading a particular file from disk. (12)

The changing of a program from one programming language into another programming language. (11)

The original high level language program before it is translated by a compiler. (10)

The processor's own language made up of binary numbers (0 and 1 only). (11)

This is the name of the machine code program produced by the translation by a compiler. (10)

This is the way your program looks to the person who is using it. (13)

Translates a high level language into machine code in a single operation. (9)
